2 <sup>nd</sup> Half					

**Most Used Line Ups:** *In most cases, teams will basically use three or four lineup combinations during the game. Statistical programs, like CyberSports, will generate various lineup reports including most used lineups. Being able to concentration on just three or four lineups allows a team to better prepare for a game.*

**Player Rankings:** *Player ranking are primarily taken from statistics. Use season statistic if available. Assists are a good indication for best passers, but also look for players that keep their heads up and see the floor along with making sharp accurate passes. Best Post Up, Penetrators, Best and Weakest Defensive Players are determined by observation and judgment.*
