

Box Alignment - "Mid Screen"

Primary "Go To" Player: #5 Post

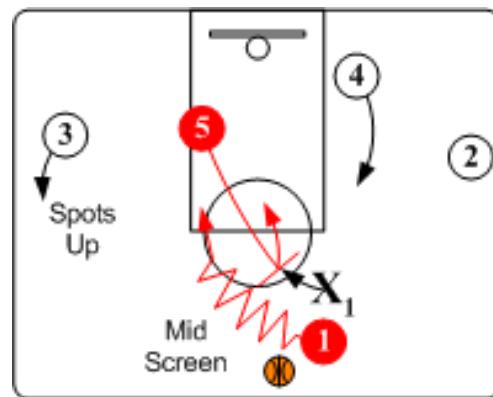

Secondary "Go To" Player: #3 Inbounder

The basic option of the Mid Screen is for the point guard to drive hard off a high post screen. Since the action takes place in the center of the floor, with shooters spotting up on the wings, it takes away the helpside support making it very difficult to defend.

Right Side Entry

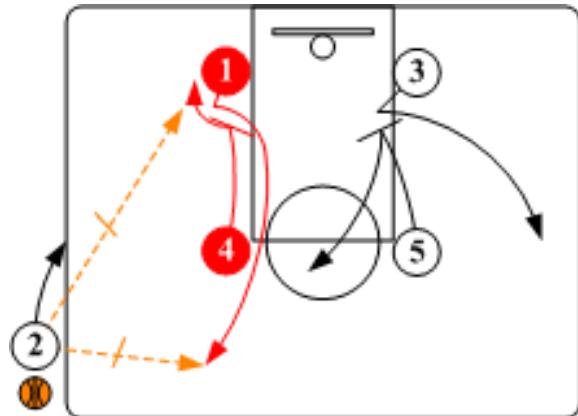

Down Screen. O4 sets a down screen for O1. O3 has option of making an inbounds pass to O1 or making a direct pass to O4 posting up. O5 sets a weakside down screen for shooter O2 and then pops up to top of circle to initiate mid screen action.

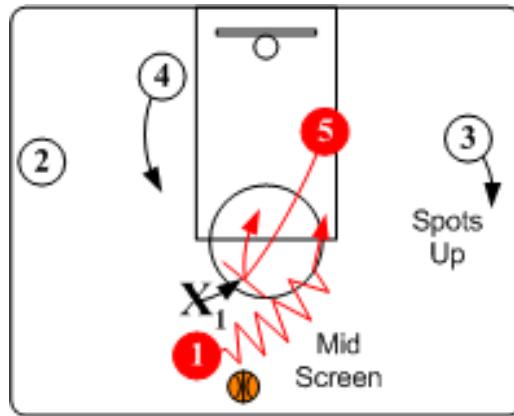

Mid Screen. Post O5 sets an "On Ball" screen to free up the point guard O1 for dribble penetration. O1 has the option of turning the corner for a drive to the basket or executing a pull up jumper if the defense goes below the screen. O1 also has options of a drop pass to the post rolling to basket or making a kick out pass to the shooters spotting up on the wings.
